

RHIBS

RIGID HULL INFLATABLE BOAT (RHIB):

- 9 meter and 6 meter RHIB
- The 6 m RHIB is employed as the tender for the Hercules and a small dive boat
- The 9m serves as a larger dive vessel
- Both RHIBS are equipped with differential GPS and tank racks

RPM also employs the shallow water magnetometer rig (to be seen to the left) that can be attached to any RHIB or other small boat. This rig is ideal for conducting magnetometer surveys in extremely shallow waters (ie: c. 2m of depth or less) as it prevents the necessity of towing the magnetometers.
